

DynamicZip Build 68 for Great Plains R8

The final planned release of DynamicZip for v8.0 is now available for [download](#) from our website! This new release is loaded with new features that you, our valued customers, asked for! Just take a look at what we've done!

Purchase Tax Accrual

- Enabled the DynamicZip Purchase Tax Accrual feature in the following Purchase Order Processing (POP) windows: Receivings Transaction Entry and Purchasing Invoice Entry.

ZIPsales Database Import

- We added a statewide option to create zero rate details which allows you to track sales into cities & counties that don't charge tax.
- The import process will now remove obsolete zip codes from the zip address table & tax schedules. This relates to the rare instances where a zip code that previously existed in the ZIPsales Database has been removed. Since the address and related tax schedules are no longer being maintained by the import process, we now remove these obsolete records.
- Added a "Print on Documents" field to set the new tax detail default for that option in our DZ State Setup window. Also added a menu item to this window to set the default value for all states. These defaults apply only to new tax details. The option can be set for existing tax details by using the DZ Modify Tax Details window. This setting relates to the Great Plains option to print tax details on sales documents.

Reports

- The Tax by Item Class Setup Report now includes the tax schedule id & description for "Taxable" item classes.

User Interface

- Zip Addressing & Tax Schedule Selection has been enabled in the IV Site Maintenance window.
- Added a Clear button to the DZ Tax by Item Class Setup window. You no longer have to either Save or Delete the record after changes have been made. You can discard your changes by clicking Clear.

Installation and Upgrade

- The DynamicZip dictionary files (KD581.DIC, KD581F.DIC, and KD581R.DIC) are automatically renamed during re-installation or upgrade.
- When DynamicZip creates new SQL tables or converts existing SQL tables, it will now automatically grant rights to DYNGRP. This means you no longer have to run the Grant.sql procedure.
